DETAILED ACTION

Application Status

1. In a preliminary amendment filed January 24, 2001, Applicants amended the specification and Claims 13, 18, 21, 22, 25, and 27 and added new claims 29-33. Claims 1-33 are pending.

Restriction

2. Restriction to one of the following inventions is required under 35 U.S.C. § 121:
- I. Claims 1-17, drawn to cells having increased porphyrin compounds and starter culture compositions thereof, classified in class 435, subclass 252.1.
 - II. Claims 18-24 and 29-31, drawn to methods comprising adding cells or starter culture to a food product, feed product, or edible product, classified in class 426, subclass 61.
 - III. Claims 25-26 and 32, drawn to methods of using a bacterial cell or starter culture composition thereof to produce metabolites, classified in class 435, subclass 139.
 - IV. Claims 27-28 and 33, drawn to methods of using s bacterial cell or starter culture composition thereof to produce bacteriocin, classified in class 435, subclass 71.3.

3. The inventions are distinct, each from the other because of the following reasons:

Group I is related to Groups II-IV as product and process of use. The inventions can be shown to be distinct if either or both of the following can be shown: (1) the process for using the product as claimed can be practiced with another materially different product or (2) the product

Art Unit: 1652

as claimed can be used in a materially different process of using that product (M.P.E.P. § 806.05(h)). In the instant case, the products can be used for a materially different process of using that product, such as in the production of porphyrin compounds. Thus, Group I is patentably distinct from Groups II-IV. Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.

Groups II-IV are related methods because they all use the cells of Group I. However, these are distinct methods due to their distinct method steps using different reagents to produce wholly different products. Moreover, the distinctness is evidenced in their distinct class/subclass classifications. Thus, Groups II-IV are patentably distinct, each from the other. Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.

Election

4. A telephone call was made to Stanislaus Aksman on September 10, 2002 to request an oral election to the above restriction requirement, but did not result in an election being made.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 C.F.R. § 1.143).

Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 C.F.R. § 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the

Art Unit: 1652

application. Any amendment of inventorship must be accompanied by a request under 37 C.F.R. § 1.48(b) and by the fee required under 37 C.F.R. § 1.17(i).

Conclusion

5. A complete response to the instant Office action must include an election of invention.
